

App Summary - umer-portfolio

Evidence source: README.md, package.json, app/*.tsx, components/**/*.*.tsx

What It Is

- A personal portfolio web app built with Next.js (App Router), React, and TypeScript.
- It presents the developer profile, skills, selected projects, and contact channels in a single-page layout.

Who It Is For

- Primary persona: recruiters, hiring managers, and potential freelance clients evaluating Umer Shahid for web development work.

What It Does

- Renders a full landing flow with Hero, About, Skills, Projects, and Contact sections.
- Provides responsive navigation with desktop links and a mobile overlay menu.
- Shows a skills grid with named technologies and visual icons.
- Displays project cards with image, description, tech tags, live link, and GitHub link, plus a Load More interaction.
- Offers direct contact actions: mailto email, LinkedIn, and GitHub profile links.
- Applies custom CSS animations and smooth scroll behavior for section navigation.

How It Works (Architecture)

- Framework layer: Next.js 16 App Router with global layout in app/layout.tsx.
- Composition layer: app/page.tsx assembles section components from components/sections.
- UI layer: client-side React components manage interactive state (navbar scroll/menu and project pagination).
- Data flow: static arrays and strings inside components feed rendering (skills and projects).
- External touchpoints: outbound links to GitHub, LinkedIn, Google Drive resume, and mailto.
- Backend API, database, authentication service, and server-side data fetching: Not found in repo.

How To Run (Minimal)

- Install dependencies: npm install
- Start development server: npm run dev
- Open: http://localhost:3000
- Optional production run: npm run build && npm start
